

Net.Pro
Professional Services

Allied Telesis Net.Pro provides access to a cross-functional team of experts, to design, implement and assess our customers' increasingly complex network applications. Using the most advanced technologies, Allied Telesis consultants will work alongside you to develop a Professional Service plan, tailored to your needs, to meet your business goals and requirements.

Allied Telesis Professional Services help to maximize your network investment, accelerate time to value and achieve higher levels of customer satisfaction, whilst providing a firm foundation for any future challenges and objectives. We will support you in building operational excellence, maintaining required levels of performance, reliability and availability, as well as ensuring scalability for future business requirements, reducing operational costs and eliminating your exposure to IT risks.

AlliedTelesis.com/services/netpro

Net.Pro capabilities include:

Network Design Service

Allied Telesis consultants design a proven solution tailored to your specific requirements.

Network Implementation Service

Entrusting your network implementation to our Professional Services team ensures a rapid, confident start for your high performance, high-value network.

Network Assessment Service

Expert assistance from our engineering team to enhance your network's value.

Net.Pro

Professional Services

Network Design Service

Allied Telesis consultants will gather the essential information required to understand your current and future requirements, aligning the new network design with your business and technical goals and removing the risk of costly network redesigns and missed deadlines.

Entrusting the responsibility of researching and documenting the network design to Allied Telesis consultants, frees up your valuable staff resources for other business requirements.

Network Design Service Deliverables

Allied Telesis' engineering team will design the solution and provide the network design documentation, consisting of:

- Business and technical project overview
- Description of key challenges and requirements
- Description of solution proposed, including topology and network architecture, network devices, technologies, features and protocols
- Description of the provisioning and management
- Network design technical description
- Best practice and procedures to implement your network

Network Implementation Service

Based on a strong foundation of network design methodology and knowledge of leading practices, Allied Telesis Network Implementation Service includes the validation of complex design principles, features, and functionalities at an early stage, thus reducing deployment risks, operational issues and resulting in a more efficient network operation.

Network Implementation Service Deliverables

Using the design documentation and input from the Allied Telesis consultant, the network implementation will be undertaken and include:

- Allied Telesis meeting with the project team
- Development of a network implementation plan
- Identification of required tasks and timelines
- Identification of major project milestones
- Identification of roles and responsibilities
- Identification of site-readiness requirements
- Provision of risk-management, implementation dependencies
- Recommended network implementation validation steps
- Project management input for Allied Telesis service deliverables
- Regular status updates on Allied Telesis service deliverables
- Network installation validation and testing results report

Professional Services

Network Assessment Service

The assessment service provides access to Allied Telesis experts, to optimize, plan extensions or resolve open issues on your network. Our consultants will assist to prioritize business goals for productivity, revenue, market share and user satisfaction. Following a model designed around a time to value experience, the service will deliver the greatest value from investments at every phase of the network life cycle.

The Network Assessment Service capabilities include:

Network Auditing

Allied Telesis consultants collect and analyze detailed information from your existing network, including network architecture and a physical audit of your network assets. The audit report will provide a detailed assessment of the ways your existing network service, or alteration to it, will impact your infrastructure.

Network Service Limitation or Problem Auditing

Allied Telesis will work together with you, and where applicable, a third party supplier, to solve a complex technical issue in your infrastructure. The resulting analysis will provide a detailed assessment and recommended changes, to solve the problem or maintain the infrastructure.

Customer Requirement Tailored Workshop

Our experts share their wide ranging expertise in video, voice, Quality of Services, Layer 3 and other technologies, to assist in determining a strategy and implementation plan for your network architecture. It is a tailored service to meet your business needs and provides recommendations on how best to ensure your network will evolve in a controlled manner.

Network Assessment Service Deliverables

Based upon the requirements document and the input from the dedicated Allied Telesis consultant, our engineering team will make the necessary recommendations for any changes and improvements, required to accomplish your stated goals.

The Network Assessment Service provides:

- Meeting with an Allied Telesis consultant with the project team
- Development of a network assessment plan
- Identify a list of the required tasks, along with an associated timetable
- Identify major project milestones for the project team
- Identify roles and responsibilities
- A detailed analysis of the status of the network with regards to the specific assessment service provided: network security, network resiliency, etc.
- Recommended network implementation items
- Recommended validation steps
- Options for implementation and testing

Take advantage of a full range of Allied Telesis services

Our managed services deliver a suite of advanced and cost-effective end-to-end networking solutions and web-based services to achieve the best performance from your Allied Telesis products.
