**DAHUA DH-PFM914**
Crimping Tool for Pass Through RJ11, RJ45 with Cutter and Wire Stripper

## Introduction

The Dahua DH-PFM914 crimping tool is designed to simplify network installation and maintenance by offering efficient and precise crimping for RJ11 and RJ45 connectors. It also includes additional tools such as a cutter and wire stripper, making it a complete solution for cabling tasks.

## Main Features

- Compatible with Pass Through RJ11 and RJ45 connectors.
- Made of durable A3 steel for long-lasting use.
- Multi-function tool: crimping, cutting, and stripping wires.
- Ergonomic handle for comfortable and safe use.

## Instructions for Use

1. **Cable Preparation**
   Insert the cable into the stripping section and apply light pressure to remove the insulation.
2. **Connector Insertion**
   Ensure the wires are in the correct order. Slide them into the RJ11 or RJ45 Pass Through connector until they extend through the end.
3. **Crimping**
   Place the connector into the appropriate slot on the tool and press firmly to ensure a secure fit.
4. **Excess Wire Cutting**
   The tool will automatically cut off excess wires when crimping Pass Through connectors.
5. **Additional Cutting and Stripping**
   Use the designated areas on the tool for cutting or stripping other wires as needed.

# Maintenance and Care

- Clean the tool with a dry cloth after use.
- Store it in a dry place to prevent corrosion.
- Regularly check screws and mechanisms for proper adjustment.
